Health crises, resilience and refoundation of food systems

Publication type: Journal article

Journal: [Systèmes alimentaires / Food Systems](#)  
[2020, n° 5. varia](#)

Author: Rastoin (Jean-Louis)

Abstract: The agro-industrial food system after major advances is now facing heavy negative externalities, with health, social and environmental crises. An alternative prospective scenario (territorialized food systems) is driven by the objectives of sustainable development. It is based on product quality, autonomy, proximity, and local, national and international solidarity. It requires new food policies.
