

Food Regions at the time of Global Change

Publication type: Journal article

Journal: [Systèmes alimentaires / Food Systems](#)
2020, n° 5. varia

Author: Soulard (Christophe-Toussaint)

Abstract: The global food system must undergo fundamental changes to ensure food security while respecting the limits of planetary resources. The regional scale offers proximity among actors which a priori facilitates the alignment of sustainable food strategies. This article reviews and compares analytical frameworks capable of articulating food and territory, from four perspectives based on local agri-food production, local food networks, urban food planning, and on the food movement.
