

## Reforming farm accounting to tackle the food challenge of the Anthropocene

Publication type: Journal article

Journal: [Systèmes alimentaires / Food Systems](#)  
2021, n° 6. varia

Authors: Valiorgue (Bertrand), Labardin (Pierre), Bluntz (Clarence)

Abstract: The observation of our food systems shows great weaknesses and the probability of a future regression is high. These weaknesses have their origins in the shift towards a new geological era, which greatly destabilizes agriculture: the Anthropocene. This article shows why adopting environmental accounting can improve the accountability and resilience of farms to meet the food challenge of the Anthropocene.
